# COVID-19 Participant Guidelines Updated 6.15.21

With the number of vaccinated people on the rise, the Center for Disease Control (CDC) and the Virginia Department of Health have updated their COVID-19 Guidelines for events; therefore, Loudoun Wildlife Conservancy (LWC) is amending their guidelines previously established on July 20, 2020.

Loudoun Wildlife continues to care about the health and wellbeing of our staff, volunteers, and program participants, and we remain committed to ensuring everyone has a positive experience while attending our programs or events.

For in-person programs, LWC will no longer require signed participant waivers to attend programs, but we will still require registration to attend programs. Participant limits, and other requirements and/or guidelines, may apply to specific programs.

In following CDC and Virginia Department of Health guidelines, **fully vaccinated** people are no longer required to wear a face mask or maintain 6' distancing. It is recommended that those who are **not fully vaccinated**, and anyone else who wishes to do so, should continue to wear a face mask and maintain 6' distancing.

For the health and safety of everyone, including those who are fully vaccinated, we continue to urge you to not participate in programs if any of the following applies:

- Tested positive or has been presumed positive for COVID-19 at any time during the past 14 days
- Been advised by a healthcare professional to self-quarantine at any time during the past 14 days
- Been in close physical contact with someone who has tested positive for COVID-19 or who has been presumed positive for COVID-19 during the past 14 days
- Been or is subject to a quarantine order or a recommendation of a healthcare professional that it is inadvisable to attend a public event

- Exhibited any of the following symptoms within the last 24 hours:
  - Fever of 100.4 or higher or sense of having a fever
  - A new cough that cannot be attributed to another health condition
  - New shortness of breath that cannot be attributed to another health condition
  - New chills that cannot be attributed to another health condition
  - New sore throat that cannot be attributed to another health condition
  - New muscle aches that cannot be attributed to another health condition or specific activity (such as physical exercise)
